BAB I
ALGORITMA

A. Algoritma Brute Force

Algoritma *brute force* adalah pendekatan yang lempang (straightforward) untuk memecahkan suatu persoalan. Biasanya algoritma ini didasarkan pada dua hal, yaitu pernyataan persoalan (*problem statement*) dan definisi/konsep yang terlibat dalam persoalan tersebut. Algoritma ini dicirikan dengan penyelesaian persoalan yang bersifat sangat sederhana, langsung, dan jelas (*obvious*). Penyelesaian dengan cara ini bergantung pada kekuatan komputasi mesin semata.

B. Spesifikasi Tugas

Word search puzzle adalah permainan kata dimana pemain harus menemukan beberapa kata tersembunyi dalam kumpulan huruf acak. Kumpulan huruf tersebut biasa diletakkan pada "papan" berbentuk segi empat atau dapat disebut juga matriks huruf. Kata-kata pada matriks huruf ini dapat ditemukan dalam delapan arah yang mungkin, yaitu, vertikal ke atas, vertikal ke bawah, horizontal ke kanan, horizontal ke kiri, diagonal ke kanan atas, diagonal ke kanan bawah, diagonal ke kiri atas, dan diagonal ke kiri bawah. Tugas yang harus diselesaikan adalah merancang algoritma brute force untuk menemukan semua kata di dalam *word search puzzle*.

Gambar 1. *Word Search Puzzle*

C. Langkah-Langkah yang Digunakan

Penulis mengimplementasikan algoritma *brute force* tanpa pendekatan heuristic. Pencarian kata dilakukan satu per satu dengan langkah-langkah sebagai berikut untuk setiap kata yang dicari:

1. Periksa setiap huruf pada matriks *puzzle* secara berurut hingga ditemukan huruf yang sama dengan huruf pertama pada kata yang dicari.
2. Periksa huruf di sebelah kanan huruf tersebut. Jika sama dengan huruf kedua pada kata yang dicari, periksa huruf di sebelah kanannya lagi. Begitu seterusnya hingga huruf ke-N pada kata yang dicari atau telah mencapai ujung matriks. Jika seluruhnya sama, maka kata telah ditemukan.
3. Jika kata belum ditemukan, periksa dengan cara yang mirip dengan langkah 2 namun ke arah lainnya yaitu horizontal ke kiri, vertikal ke bawah, vertikal ke atas, diagonal ke kanan bawah, diagonal ke kanan atas, diagonal ke kiri bawah, dan diagonal ke kiri atas. Lakukan hingga kata ditemukan.
4. Jika kata belum ditemukan, ulangi langkah 1 – 3 hingga kata ditemukan atau tidak ada lagi huruf yang sama dengan huruf pertama pada kata yang dicari.

SOURCE PROGRAM

A. Struktur Kode

Program ditulis dalam bahasa C++ standar 2014. Source terbagi menjadi tiga file yaitu “main.cpp”, “puzzle.hpp”, dan “puzzle.cpp” yang disimpan dalam satu direktori.

B. main.cpp

File ini berisi alur utama program.

```
#include <iostream>
#include <fstream>
#include <string>
#include <exception>
#include <stdexcept>
#include <chrono>
#include <vector>

#include "puzzle.hpp"

void help()
{
  std::cout << "Usage: wordpuzzle [filename]\n"
            << "If file is not provided, reads stdin.\n";
}

int main(int argc, char *argv[])
{
  std::ifstream fin;

  try
  {
    // 1: Process argument

    if (argc == 2)
    {
      if (argv[1] == std::string("-h") || argv[1] == std::string("--
help"))
      {
        help();
        return 0;
      }
      else
      {

BAB IV
PENUTUP

A. Capaian

No.	Poin	Tercapai
1.	Program berhasil dikompilasi tanpa kesalahan (no syntax error)	Ya
2.	Program berhasil running	Ya
3.	Program dapat membaca file masukan dan menuliskan luaran	Ya
4.	Program berhasil menemukan semua kata di dalam puzzle	Ya

B. Kesimpulan

Penulis berhasil membuat program untuk menyelesaikan persoalan *word search puzzle* dengan algoritma *brute force* dengan bahasa C++ sesuai dengan spesifikasi yang diberikan. Penyelesaian dilakukan dengan pendekatan non-heuristik. Waktu yang dibutuhkan untuk menjalankan program pada *test case* yang dicantumkan sangat cepat sehingga sulit diukur, namun tercatat tidak melebihi 1 milisekon untuk 50 kata pada *puzzle* 36x34 dengan kurang lebih 35 ribu perbandingan huruf.

C. Saran

Program penyelesaian *word search puzzle* dengan algoritma *brute force* dapat memanfaatkan pendekatan heuristik untuk mengurangi jumlah komputasi yang dilakukan sehingga mempercepat proses pencarian.
